Breakthroughs in Reducing Inflammation
Thursday, March 23, 12:00 pm-12:30 pm
Room 303C

Session Summary: Hear the results of recent studies on a proprietary Rose Hip extract that shows promising results in reducing inflammation, joint discomfort and cholesterol levels. A principal researcher on the compound, Dr. Kaj Winther, will detail how the compound was developed in Denmark and the effect of LitoZin on decreasing cholesterol levels, as well as for alleviating symptoms of osteoarthritis. To date a total of 13 chemical, pharmacological and clinical studies have been completed on LitoZin and additional studies are ongoing.

Speaker: Kaj Winther, MD, Glostrup Hospital, University of Copenhagen, Europharma Inc

Biography: Kaj Winther, MD is currently head of the Department of Clinical Chemistry at Glostrup Hospital at the University of Copenhagen, Denmark, where he has served since 1992. Dr. Winther graduated from the University of Copenhagen, School of Medicine in 1980 and he was licensed to practice medicine in Denmark in 1986. He has also served as an Associate Professor at the University of Copenhagen since July 1990.
